Fund Performance and unit value development September 30, 2023

The net annual return for the period 30 September 2022 to 30 September 2023 is **5.88%**. The unit value of Prestigj fund had increased by **-0.13%** during September, as a result of the increase of the securities interest rates issued by the Albanian Government. The Fund continues to have the same investment portfolio structure, investing in T-Bill and T-Bond issued by the Albanian Government. As a result, the portfolio value varies when securities interest rates change and investment return varies based on market conditions, especially changes in interest rates of Albanian government securities. Thus, when interest rates increase, the securities value in the portfolio decreases and consequently the rate of return for the previous period decreases. The opposite happens when interest rates fall. Therefore, the Fund unit value can be volatile. Volatility is a natural part of investment funds, and it can never be eliminated, so the unit price of the fund may also fall, not only increase.
