## Fund Performance and unit value development November 30, 2024

The net annual return for the period 30 November 2023 to 30 November 2024 is **5.38%**. The unit value of Prestigj fund increased by **+0.86%** during November, recording the highest monthly performance for 2024. The decrease of the Albanian government securities interest rates has had a positive impact on the investment portfolio of the Prestigj fund.

The Fund continues to have the same investment portfolio structure, investing in T-Bill and T-Bond issued by the Albanian Government. As a result, the portfolio value varies when securities interest rates change and investment return varies based on market conditions, especially changes in interest rates of Albanian government securities. Thus, when interest rates increase, the securities value in the portfolio decreases and consequently the rate of return for the previous period decreases. The opposite happens when interest rates fall. Therefore, the Fund unit value can be volatile. Volatility is a natural part of investment funds, and it can never be eliminated, so the unit price of the fund may also fall, not only increase.
