Risk and Reward Profile

Low Risk
Low Return

High Risk
High Return

The estimated risk profile of the Feeder Fund Raiffeisen Sustainable Solid is closely related to the risk profile of the Master Fund. Based on the historical data of returns of the Master Fund over the last 5 years, the projected risk profile of the Feeder Fund belongs to third category of the synthetic risk and reward indicator (SRRI=3).

The synthetic risk and reward indicator corresponds to an integer, used to rank the Fund's risk profile on a scale of 1 to 7, based on increasing level of volatility. The lowest category does not mean that the investment is riskless. This indicator aims to offer the investor an overview of the fluctuations in Fund unit price based on historical performance. Historical data used to generate the indicator cannot constitute a guarantee on future risk profile.

Performance of Feeder fund

Monthly performance was **-0.62%** for Raiffeisen Sustainable Solid – Feeder fund during December.

Global bonds were hurt by the evolving interest rate backdrop, with 10-year yields rising across the US and Europe. Stocks also fell in December, with broad-based weakness across regions. However, 2024 marks the second consecutive year of double-digit returns.

It should be noted that the rate of return varies depending on market conditions and the unit value may be volatile, so it is not static or always increasing, but may also fall because of changes in market conditions. Volatility is a natural part of investment funds, and its total elimination is impossible.

The investors of Raiffeisen Sustainable Solid fund and all funds managed by Raiffeisen Invest are advised to have the longest possible investment horizon to benefit from an optimal return on investment and thus in the medium or long term to be able to recover the negative effects, which are created in the short term. We do encourage investors to maintain their investment by not changing their investment objective of staying in fund driven by the unusual situation created by market developments, because in this way they will not risk getting out of the fund at the wrong time for their investment.

Commentary of Master fund management on financial market developments during December

The international stock markets moved sideways in December and were influenced in particular by the European Central Bank's interest rate decision, the inflation and unemployment figures from the US and talks between Trump and Putin. In December, European government bonds gave back some of the price gains made in the previous month, while corporate bonds remained stable. The central bank lowered the key interest rate to 3% but left the further path of monetary easing open. The fund performed well in this environment.

The fund invests broadly diversified in bonds and equities of responsibly operating companies and states.

Developments in the coming months will primarily depend on further central bank measures and economic growth in the USA and Europe. Geopolitics will also be closely monitored.

Data on fund return referring to the past is only indicative and does not represent a promise or guarantee of the fund return in the future. All other numerical examples are used for illustrative purposes and analysis of historical data and should not be used by investors to draw conclusions for the future.

Potential investors should read the Feeder Fund Prospectus and Fund Rules. Raiffeisen Invest and the fund's sales force do not guarantee a certain return on the fund.
