## Fund Performance and unit value development December 31, 2025

The annual return for the period 31 December 2024 to 31 December 2025 is **3.77%**. The unit value of Vizion Fund had increased by **0.49%** during December. The decrease of the Albanian government bonds interest rates has had a positive impact on the investment portfolio.

Investors should bear in mind that the investment return varies based on market conditions, especially changes in interest rates of Albanian government securities. Thus, when interest rates increase, the securities value in the portfolio decreases and consequently the rate of return for the previous period decreases. The opposite happens when interest rates fall.

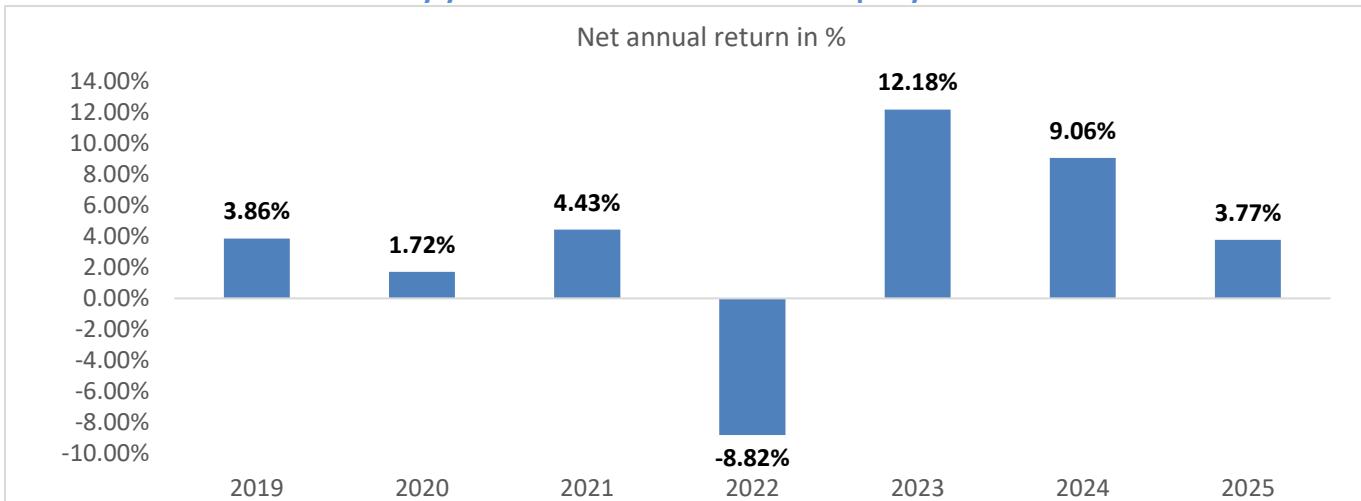

Therefore, the Fund unit value can be volatile. Volatility is a natural part of investment funds, and it can never be eliminated, so the unit price of the fund may also fall, not only increase.
